

Hi Davina and Janelle – I am doing some fact gathering about the brown water event that occurred at the [redacted] property near Luxemburg, WI for my management. Some of the material I received from my EPA colleagues mentioned that you were both involved with sample collection at the property.

I received the bovine bacteroides, total coliform and E. coli results. Did you test for nitrate (as N), nitrate+nitrite (as N), and/or nitrite (as N) as well?

Thanks for the information!

Joe
